humans are causing global warming and offers a path to the future Since the discovery of fire humans have been energy users and always will be And this is a good thing our mastery of energy is what separates us from the rest of the animal kingdom and has allowed us to be the dominant species on the planet However this mastery comes with a price we are changing our environment in a profoundly negative way by heating it up Using one engaging story after another coupled with accessible scientific facts world authority Richard B Alley explores the fascinating history of energy use by humans over the centuries gives a doubt destroying proof that already high levels of carbon dioxide are causing damaging global warming and surveys the alternative energy options that are available to exploit right now These new energy sources might well be the engines for economic growth in the twenty first century Adirondack Journal of Environmental Studies ,1994

**Science** ,2004 An Unworthy Future Joseph Toomey,2014-07-22 It is difficult to find an area of public policy more plagued

by misunderstanding than energy policy Even worse every time the subject is raised we are obligated to get mired in pointless arguments about the weather This book helps set the record straight Not convinced Consider some of these inconvenient truths The cost of green energy climate remediation is anywhere from 10 to 1 000 times greater than the damage from the climate change it attempts to alleviate Germany the worlds leader in solar energy will spend more than 280

billion by 2030 on solar subsidies But all of that investment will only forestall 22nd century global warming by 37 hours Obamas carbon tax would cost Americans 1 2 trillion over just ten years But it would only reduce the midrange 3 degree modeled 22nd century global temperature increase by 0 038 degrees Celsius At their current emissions growth rate it will take China nine months to replace the entire U S emissions cut that Obama wants to achieve over seven years at a staggering cost in American jobs and lost economic growth The U S biofuel program imposes a cost on consumers 9 862 times greater than any climate benefit they or their distant progeny will ever derive This is not another skeptical global warming polemic but an economic evaluation of how and why green energy will fail The world has too many pressing needs For the money Obama squandered on just a single bankrupt crony solar company the U S could have prevented 300 000 childhood malaria deaths in poor countries A thoroughly researched heavily documented book by an expert in his field it will demonstrate in meticulous detail how wasteful and economically inefficient Obamas green energy dead end future will be compared to other worthy alternatives Its time to end the hysterical climate cynicism and get on humanitys side **Essential Environmental Science** Edward A. Keller,Daniel B. Botkin,2008 Essential Environmental Science provides a non quantitative approach that is based on principles critical thinking and the big questions that are driving the field today It offers a condensed look at the field covering topics in way that will help readers answer the big questions It eliminates more detailed or advanced topics to make the material more accessible while also placing the focus on today s important issues *Earth Sciences History* ,2009
