Volcanoes Study Guide

1. Where are most volcanoes located?

The **Ring of Fire** is a ring of volcanoes around the Pacific Ocean that result from subduction of oceanic plates beneath lighter continental plates. Most of the Earth's volcanoes are located around the Pacific Ring of Fire because that is the location of most of the Earth's subduction zones. This area is known as a **volcanic belt**. A volcanic belt is an area that has a large amount of volcanic action. Volcanic belts usually form around the boundaries of Earth's plates.

2. What is a hot spot? How are they different from most volcanoes?

"Hotspot" Volcano (e.g., Hawaii)

Places known as **hot spots** are volcanic regions thought to be fed by underlying mantle that is anomalously hot compared with the surrounding mantle. They differ from most volcanoes in that they may be on, near to, or far from tectonic plate boundaries.

Hot spots are due to hot mantle plumes that rise from the mantle.
