Google Drive In The Us Setup:

Deep Learning for Beginners Dr. Pablo Rivas, 2020-09-18 Implement supervised unsupervised and generative deep learning DL models using Keras and Dopamine with TensorFlow Key Features Understand the fundamental machine learning concepts useful in deep learning Learn the underlying mathematical concepts as you implement deep learning models from scratch Explore easy to understand examples and use cases that will help you build a solid foundation in DL Book Description With information on the web exponentially increasing it has become more difficult than ever to navigate through everything to find reliable content that will help you get started with deep learning This book is designed to help you if you re a beginner looking to work on deep learning and build deep learning models from scratch and you already have the basic mathematical and programming knowledge required to get started The book begins with a basic overview of machine learning guiding you through setting up popular Python frameworks You will also understand how to prepare data by cleaning and preprocessing it for deep learning and gradually go on to explore neural networks A dedicated section will give you insights into the working of neural networks by helping you get hands on with training single and multiple layers of neurons Later you will cover popular neural network architectures such as CNNs RNNs AEs VAEs and GANs with the help of simple examples and learn how to build models from scratch At the end of each chapter you will find a question and answer section to help you test what you ve learned through the course of the book By the end of this book you ll be well versed with deep learning concepts and have the knowledge you need to use specific algorithms with various tools for different tasks What you will learn Implement recurrent neural networks RNNs and long short term memory LSTM for image classification and natural language processing tasks Explore the role of convolutional neural networks CNNs in computer vision and signal processing Discover the ethical implications of deep learning modeling Understand the mathematical terminology associated with deep learning Code a generative adversarial network GAN and a variational autoencoder VAE to generate images from a learned latent space Implement visualization techniques to compare AEs and VAEs Who this book is for This book is for aspiring data scientists and deep learning engineers who want to get started with the fundamentals of deep learning and neural networks Although no prior knowledge of deep learning or machine learning is required familiarity with linear algebra and Python programming is necessary to get started *Blockchain Beyond Basics* Naresh R. Jasotani, 2022-12-29 This book introduces you to the world of Blockchain with an interesting AI perspective to the Blockchain and with detailed associated videos to make concepts easier to understand This book provides you with hands on technical details to guide you to create your own smart contracts NFTs Tokens Flash loan algorithms and AI and Machine learning algorithms This book is aimed at newcomers to the concept of Blockchain enthusiasts explorists who would like to learn about the concepts of Blockchain in simple terms with easy to understand stories This book provides a practical guidance and approach for utilizing Blockchain and its associated technologies in the real world scenario You are not expected to be an expert in Solidity Web3 Javascript or

Python at all What s inside The Story of Blockchain Solidity Programming Create your own tokens coins Create your own NFTs Web3 on node js Web3 using python AI perspective to Blockchain Flash Loans Honestly speaking this book is meant for those lazy engineers aspiring blockchain solidity developers Web3 engineers experienced IT professionals in other fields who like the authors hate reading through lengthy books with several hundreds of pages of mathematical models and equations to even getting started with Blockchain Many of us are looking for a book with not more than 170 180 pages to gain a very fundamental understanding of the Blockchain ecosystems create your own contracts NFTs There are many books articles guides and documents published on Blockchain and most of them either focus on smart contracts solely or web3 reference books and most often they tend to be very lengthy spanning several hundred pages Of course they are aimed at serving an exhaustive content for readers to get a deep understanding on the subjects As you go through the book you will learn the concepts of Blockchain with simply explained stories use cases for each technology and then set up your development technical environment to dive deeper in Solidity Web3js Web3py Flash loans Tokens NFTs and last but not the least an AI perspective to the blockchain As you read through the book hopefully the myths of cryptocurrencies tokens NFTs would be debunked and you will get a very granular basic to an implementation level understanding and approach of developing decentralized applications on the blockchain Let us start learning **Robo-Advisor with Python** Aki Ranin,2023-02-28
