The Power of Picture Books in Teaching Math and Science Lynn Columbia, 2017-05-12 This book's 50 plus lessons each based on a different picture book or story will help classroom teachers build a foundation for teaching math science and social studies concepts to their students Each lesson uses children's literature to make challenging abstract concepts relevant to children's lives inviting them to learn these concepts while responding to a story's illustrations theme characters and plot The lessons also demonstrate how teachers can use children's literature to meet national standards in math science and social studies Chapters 1 through 5 set the stage for using picture books discussing the effective imaginative integration of literature into the classroom Teachers will learn to create an environment that ensures that when children and books come together the experience is enjoyable and thought provoking Chapters 6 through 9 provide individual lessons by grade level with detailed activities based on specific books

Luigi Moretti Roberto Podda, 2024-08-01 Luigi Moretti Lessons of SPAZIO focuses on the theoretical work of the Italian architect Luigi Moretti Rome 1906 1973 It does so selectively focusing on the editorials he published between 1950 and 1953 as editor in chief of the magazine SPAZIO as well as a further essay on parametric architecture published in 1971 1972 in the first issue of the magazine MOEBIUS directed by his friend Giulio Roisecco This book rediscovers Moretti's personal impact on international architectural theory through thoughtful comments that shed light on the architect's modernity and original approach Although Moretti is an architect renowned for his projects and buildings his theoretical essays are less well known The aim of this book is therefore to explore Moretti's theoretical work which covers many topics including pictorial art sculpture architecture urban planning music cinema poetry mathematics computer science parametricity In addition to the translation from Italian to English the book contains reproductions of the original articles accompanied by a series of essays of critical commentary and updated interpretations that show new ways of approaching reading and understanding the foundations of current architectural theory and its progress over the last 50 years This book approaches Moretti's thought from a new perspective with the aim of reconsidering the originality of this brilliant and visionary architect who was intellectually ostracised for many years due to political and ideological contingencies even though he personified the ideal of the Renaissance man in modern times A re-reading of Moretti's work is more justified today than has ever been before both to reconnect the threads with contemporaneity and to make his intensity and farsightedness of vision known to researchers teachers and students working in the areas of architecture and design theory technology and art today
