The text presents a balanced and comprehensive treatment of both time and frequency domain methods with an emphasis on data analysis. Numerous examples using data illustrate solutions to problems such as discovering natural and anthropogenic climate change evaluating pain perception experiments using functional magnetic resonance imaging and the analysis of economic and financial problems. The text can be used for a one semester quarter introductory time series course where the prerequisites are an understanding of linear regression basic calculus based probability skills and math skills at the high school level. All of the numerical examples use the R statistical package without assuming that the reader has previously used the software. Robert H.
