Timmerhaus, 2012-12-06

The First International Cryogenic Materials Conference ICMC provided a new forum for the presentation of low temperature materials research. The conference held in conjunction with the 1975 Cryogenic Engineering Conference provided materials research personnel with excellent exposure to current developments in the cryogenics field and beneficial interactions with designers of cryogenic systems. Because of the large response to a late call for papers, the enthusiasm and encouragement at the meeting, and the wide spectrum and high quality of papers, the Second International Cryogenic Materials Conference is being planned along with the 1977 Cryogenic Engineering Conference for Boulder, Colorado, in the summer of 1977. The success of the First International Cryogenic Materials Conference was certainly in large measure due to the excellent hospitality of our Canadian hosts, the Royal Military College of Canada and Queen's University in Kingston, Ontario. In particular, the efforts of A. C. Leonard and his staff ensured an excellent conference and a pleasant and memorable visit to Canada. The Cryogenic Engineering Conference Board was both generous and skillful in helping to initiate this new conference, and their guidance and acceptance is gratefully acknowledged. The Cryogenic Engineering Conference program chairman, M. J. Hiza, greatly facilitated the interaction for the two conferences and provided valuable assistance in generating a workable program. The proceedings of the 1975 Cryogenic Engineering Conference are published as Volume 21 of the *Advances in Cryogenic Engineering* and include many papers indicating innovative use of new cryogenic materials properties data. **U.S. Environmental Protection Agency Library System Book Catalog Holdings as of July 1973** United States. Environmental Protection Agency. Library Systems Branch, 1974 *Books in Print*, 1982 **Frozen Ground Engineering** Orlando B. Andersland, Branko Ladanyi, 2003-11-05. This new edition of *Frozen Ground Engineering* gives a peerless presentation of soil mechanics for frozen ground conditions and a variety of frozen ground support systems used on construction projects worldwide. An authoritative update of the industry standard, this Second Edition covers the essential theory, applications, and design methods using frozen ground in the construction of deep shafts, tunnels, deep excavations, and subsurface containment barriers. New material features design models for pavement structures used in seasonal frost and permafrost areas, new information on the movement of fluid phase contaminants in frozen ground, and helpful appendices offering guidance on common frozen ground tests and SI unit conversions. This new edition gives the essential information engineers, geologists, and students need in a complete reference, including up-to-date information on sensitivity of frozen ground to climate change, experimental work on frozen soil creep and strength, monitoring creep in frozen slopes, frost protection of foundations using ground insulation, highway insulation, load restrictions for seasonal frost areas.
