

**WARNING**

There is risk of serious injury or death to machine operators and bystanders from "Chain shot", which is a high-speed separation of chain parts that can occur in the event of a broken chain caused by incorrect chain repair or by poor chain maintenance.

If the saw chain breaks loose chain links may be flying around with a lot of force, causing serious personal injury. It is absolutely forbidden for anyone to stand in front of or behind the saw bar in the longitudinal direction of the saw bar during operation.

If a chain comes off the saw bar, check the chain carefully for fractures, bent teeth etc.

Make sure that the saw bar returns immediately after you have driven off the saw across the log. Driving excessive overcutting distances of one go should be avoided. If the saw bar prevents the log, the saw chain may come off the bar. For more details see the control system instructions for how to adjust the sawing depth.

Grease new saw bars and saw chains before putting them to use.

Check saw chains with the teeth in the sliding surfaces of the saw bars and cutter bars (in the direction of the cut).

**Lubrication**

Chain-bar-sprocket system must receive enough oil, and the oil must stay in the chain, bar, and sprocket long enough to prevent excessive wear.

A positive oil system machinery has been developed. Hydraulic fluid for the purpose of lubricating the saw bar and saw chain. Hydraulic fluid is not adequate for chain lubrication. A separate oiler adding high quality lubricant lubricant is required.

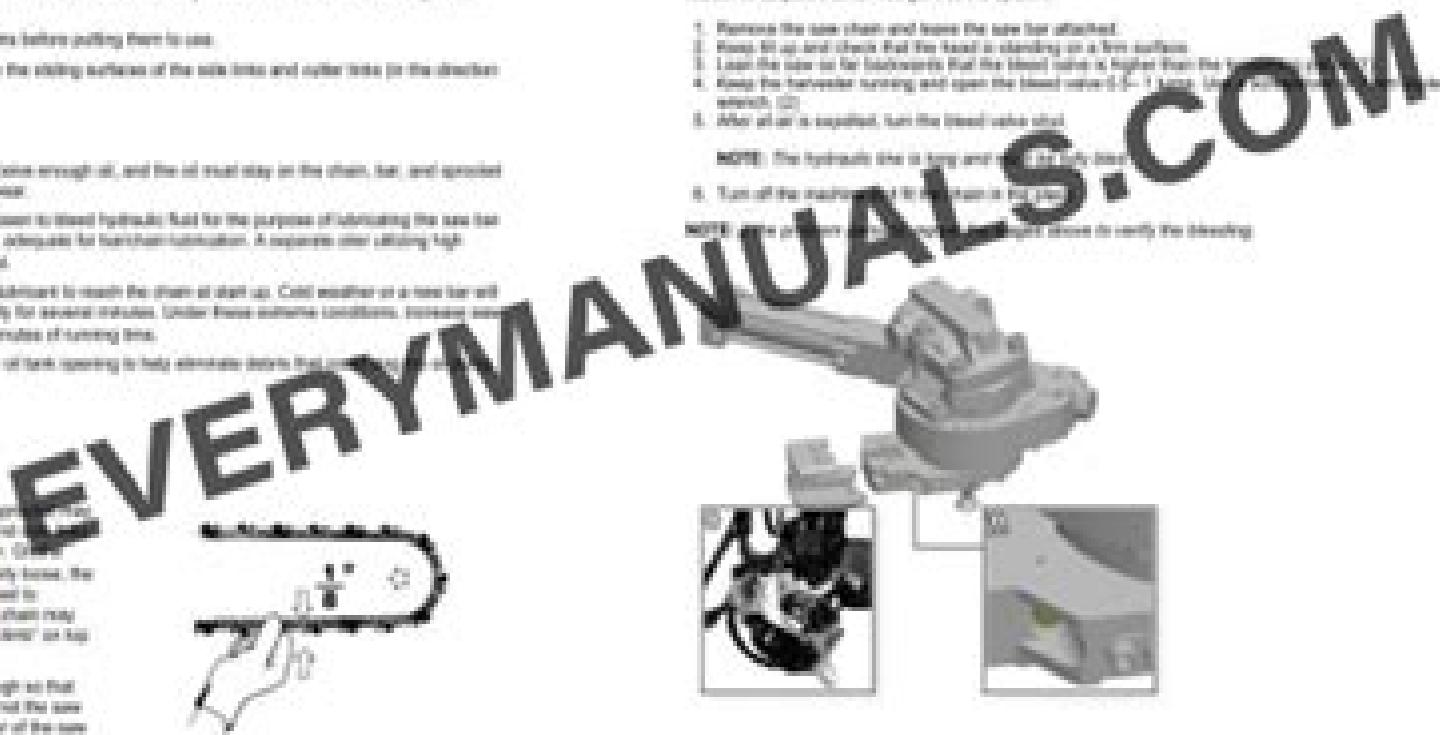

After each time that must be allowed to lubricate the chain at start up. Chain rotation at a low torque and to the time. But the chain already for several minutes. Under these extreme conditions, lubricant must spent gradually over the first few minutes of running time.

Install a fine wire mesh filter over the oil tank opening to help eliminate debris that may enter the oil tank and damage the oil system.

**CHAIN TENSIONING**

If the saw chain is too tight, then the saw chain will not be able to move. If the saw chain is too loose, the saw chain will not be able to move. If the saw chain is too loose, the saw chain may come off the saw bar. If the saw chain is too loose, the saw chain may come off the saw bar.

As a rule, chain should be tight enough so that cutter bar links are pulled firmly against the saw bar at all points around the perimeter of the saw bar. Correctly tensioned, it should still be possible to pull the chain with thumbs and forefingers (grasping each other, away from the bar ends). Cutters should come off the saw roughly 1/8 inch under the lug of lug pressure. Tension should be checked periodically. (Remember it expands with heat, chain that is unfortunately bent or twisted should be allowed to cool before re-tensioning. As part of your routine shut-down procedure at the end of

each shift, release chain tension to prevent damage to the chain links and contacts.

**WARNING**

Always turn off the diesel engine before removing the saw unit. Danger of cuts!

**BLEED CHAIN TENSIONING SYSTEM**

**NOTE:** Always bleed the system after the main pressure lines is repaired and also if there is any reason to suspect that oil has got into the system.

1. Remove the saw chain and leave the saw bar attached.
2. Push it up and check that the head is standing on a firm surface.
3. Loosen the saw bar fasteners. But the blade blade is higher than the bar.
4. Turn the tensioner housing and open the bleed valve 1/4-1/2 turn, wait a second, (2).
5. After oil air is released, turn the bleed valve shut.

**NOTE:** The hydraulic line is long and may be very long.

6. Turn off the main pump. Wait a few minutes.

**NOTE:** Turn on the main pump again and wait a few minutes to verify the bleeding.

**SAW BAR**

Saw bar maintenance and the related adjustments largely determine the extent of the saw bar life. This is why the following instructions require undivided attention.
