learn is to build something from scratch and in this book you'll build your very own diffusion model and vision transformer. As you work through each stage of development you'll develop an understanding of how these models can be customized, applied and integrated for impressive multimodal AI. *Build a Text to Image Generator from Scratch* teaches you how to build and train models to generate high resolution images based on text descriptions. Edit an existing image based on text prompts. Build and train a model to add captions to images. Build and train a vision transformer to classify images. Fine tune LLMs for downstream tasks such as classification, text or image generation. Better differentiate real images from deepfakes. About the technology AI generated images appear everywhere from high end advertising to casual social media feeds. Text to image tools like Dall-e, Midjourney and Flux make it easy to create AI art, but how do they work? In this book you'll find out by building your own text to image generator. About the book *Build a Text to Image Generator from Scratch* explores both transformer based image generation and diffusion models. You'll work hands on to build a pair of simple generation models that can classify images automatically, add captions, reconstruct images and enhance existing graphics. Author Mark Liu guides you every step of the way with clear explanations, informative diagrams and eye opening examples you can build on your own laptop. What's inside *Build a vision transformer to classify images*: Edit images using text prompts. Fine tune image models. About the reader: Requires basic knowledge of generative AI models and intermediate Python skills. About the author: Mark Liu is the founding director of the Master of Science in Finance program at the University of Kentucky. He is also the author of *Learn Generative AI with PyTorch*. Table of Contents: Part 1: 1 A tale of two models: Transformers and diffusions. 2 Build a transformer. 3 Classify images with a vision transformer. 4 Add captions to images. Part 2: 5 Generate images with diffusion models. 6 Control what images to generate in diffusion models. 7 Generate high resolution images with diffusion models. Part 3: 8 CLIP: A model to measure the similarity between image and text. 9 Text to image generation with latent diffusion. 10 A deep dive into Stable Diffusion. Part 4: 11 VQGAN: Convert images into sequences of integers. 12 A minimal implementation of DALL-E. Part 5: 13 New developments and challenges in text to image generation. A: Installing PyTorch and enabling GPU training locally and in Colab.

DALL-E Decoded Moss Adelle Louise, 2024-03-30 Title **DALL-E Decoded** A Comprehensive Guide to Understanding and Utilizing AI Image Generation Introduction DALL-E an awe-inspiring creation by OpenAI stands as a landmark breakthrough in Artificial Intelligence AI technology With its remarkable ability to generate synthetic images imaginations the significance of this AI image generator stretches across a wide array of domains In this comprehensive guide we delve into the intricacies of DALL-E unpacking the inner workings and shedding light on the unparalleled potential it holds for various industries

Genesis Jens Knappe, 2022-10-23 Jens Knappe runs a photo agency and has been using systems with self-learning algorithms with artificial intelligence for about ten years initially for the automatic recognition and classification of the agency's image inventory and for some time now also such systems that independently create CGIs

computer generated images Therefore he was among the first to put OpenAI's novel text to image system DALL E 2 through rigorous testing for possible errors potential dangers and also in view of its possibilities before it was unleashed on humanity From the very first images the system produced it was clear that this was a milestone of epochal proportions leaving its predecessors far behind This is undoubtedly only a snapshot in an exponential almost explosive development But an important one Because this is where the human claim to sole representation of creativity comes under pressure DALL E 2 is part of the most successful Large Language Model to date GPT3 and therefore can draw on a large part of what has been published on the Internet as its educational treasure What could be more obvious than to feed the system with the grand narratives scientific theories ancient and modern myths and future visions of humankind and see what comes out GENESIS a subjectively colored creation story based on human myths was the guideline for the test program to AI this book is a substrate of this systematic challenge to its knowledge and creativity It is a glimpse into a black box since while the technical methods that can be used to improve the performance of these self learning neural networks which mimic the human brain are being discovered with increasing precision one question remains unanswered Why For what reason are they getting better Why do the sentences that a chatbot spits out lining up one word after another according to a probability calculation become more and more similar to the communication of a real person So much so in fact that even programmers and engineers in developing companies with a sober prosaic state of mind are increasingly getting the feeling that their computer programs have gained consciousness and sentience Why do pixels generated according to just such probability calculations placed next to other pixels result in an overall image that appears to be ever more coherent and intelligently composed Images that appear on the screen a few seconds after the input of a descriptive text and where one can hardly escape the impression that one is dealing with a highly intelligent and educated creative counterpart on the other side Machine or not This book gives an insight into the Brave New World of Artificial Creativity
