contributors over many centuries however once the system was in place it could be extended indefinitely Although not fully understood during his lifetime the Newtonian method has since been applied to many subjects outside of physics including chemistry physiology and philosophy This book analyses the Newtonian method and demonstrates how it represents the very roots of our understanding of the great world system we live in today **Technology and Science for the Ships of the Future** Alberto Marinò,2018-06-15 In 1974 a scientific conference covering marine automation group and large vessels issues was organized under the patronage of the Technical Naval Studies Centre CETENA and the Italian National Research Council CNR A later collaboration with the Marine Technical Association ATENA led to the renaming of the conference as NAV extending the topics covered to the technical field previously covered by ATENA national conferences The NAV conference is now held every 3 years and attracts specialists from all over the world This book presents the proceedings of NAV 2018 held in Trieste Italy in June 2018 The book contains 70 scientific papers 35 technical papers and 16 reviews and subjects covered include comfort on board conceptual and practical ship design deep sea mining and marine robotics protection of the environment renewable marine energy design and engineering of offshore vessels digitalization unmanned vehicles and cyber security yacht and pleasure craft design and inland waterway vessels With its comprehensive coverage of scientific and technical maritime issues the book will be of interest to all those involved in this important industry
