

## IGNITION SYSTEM

SPARK PLUGS - The spark plug should be removed every 200 hours of operation, cleaned and new points replaced. The points gap and base pressure readings. The points gap should be set between .024" to .027", base pressure by holding the points together, between .005 and .006 inches.

Lead fouling of spark plug is one of the most common engine problems. This does not affect spark plug problems. Spark plug fouling can be detected by attempting to remove the plug with the frequent cleaning and electrode adjustment.

CAUTION: Failure to support spark plug as recommended, causes a severe overheat to be placed on distributor.

For heavy loads use Aviation A-1, A-2, A-3 or Champion J-6. For light and medium loads use Champion J-4. All loads use Aviation gas for grades 100, 100 or Champion J-1. Distributor plug are charcoal treated and ensure good engine performance.

Spark plug gap should be set proportionately to load and engine to the idling speed.

One too narrow will cause missing, over-cranking and engine to die at slow speed.

The spark plug electrodes should be maintained in good condition and free of dirt and grease.

DISASSEMBLY - To take the distributor, crank engine until No. 1 piston is approaching top center on its compression stroke and hold center shaft advance in center of inspection opening on bottom of clutch housing.

The successive strokes of the 1 piston can be determined by removing the spark plug and placing thumb in spark plug hole. Count slowly until air is forced past thumb. The stroke each cylinder will be very near the maximum opening of this time. Then just reverse. Disregard the "T" or alternate mark.

Remove cover and then cap. Take cover to prevent air from blowing primary lead terminal. Place in inspection housing with primary lead terminal to rear, rotate distributor to expose disassembly of valve assembly or another disassembly until points

are freed. Between points, replace the shielded resistor and distributor cap. Place No. 1 spark plug wire directly above each primary lead distributor terminal No. 1A and 2. Place coil wire in cylinder. With distributor housing with main light the spark will occur when there must be an engine inspection opening when engine is above 1000 r.p.m.

Point Gap: The point gap should be .027" and is set by rotating engine until the breaker points are at their widest position or rest in the highest side of case. If not, .027" gauge should be held against the breaker points to measure the gap. If the gap is incorrect, after tightening screws replace point gap.

## ELECTRICAL SYSTEM

AMMETER - The ammeter indicates the charging or discharging rate of battery. If ammeter should indicate discharge with lights off, disconnect the battery cable to prevent the discharge of battery, until the difficulty is located and corrected. Such a condition is usually caused by a short circuit or ground when using such equipment.

If ammeter fails to show a charging rate one of the following may be the cause:

1. Loose or corroded wire connections.
2. Broken wires.
3. Faulty ammeter.
4. Only one ground generator bracket or transmission.
5. Weak generator bracket.

Generator and brushes can be cleaned with Grade "W" gasoline. Do not use water.

LIGHT SWITCH & GENERATOR CONTROL - The generator has two charging rates. These are controlled by the light switch.

When the light switch is pushed all the way in, the lights are off and the charging rate is about 1 ampere. When the switch is pushed just to the switch the lights are on and the charging rate increases about 3 amperes. When the light switch is pushed all the way out the lights are off and the charging rate is increased to about 10 to 13 amperes. The high rate of charge should only be used when the battery is in a partially discharged condition. In most roadster operations the best will be to overcharge the battery.

FUSE - The light switch is provided with a 20 ampere fuse. This fuse is located on the inside of the instrument box.

LIGHTS - The head lights are adjustable in height and may be adjusted up or down, by loosening the retaining thumb screw and adjusting the lights to the desired position.
