## **Vascular Engineering Prospects Medicine Multidiscipline:**

**Vascular Engineering** Kazuo Tanishita,Kimiko Yamamoto,2016-03-17 This book describes the fundamental biology and mechanics of the vasculature and examines how this knowledge has underpinned the development of new clinical modalities including endovascular treatment and vascularization of reconstructed tissue for regenerative medicine Vascular engineering is a multidisciplinary field integrating vascular biology hemodynamics biomechanics tissue engineering and medicine Each chapter offers insights into the dynamics of the circulatory system and explains how the impact of related disease conditions atherosclerosis hypertension myocardial ischemia and cerebral infarction has generated a focus on developing expertise to both maintain and treat the vascular system As a comprehensive book in this expanding area Vascular Engineering serves as a valuable resource for clinicians as well as academics and professionals working in biophysics biomedical engineering and nano and microrheology Graduate students in these subject areas will also find this volume insightful

### **Histone and**

**Non-Histone Reversible Acetylation in Development, Aging and Disease** Marta Halasa,Anna Wawruszak,2025-08-02 This volume explores various aspects of reversible acetylation of histone and non histone proteins focusing on their roles in development ageing and disease progression It examines the biological consequences of modulating acetylation levels by histone acetyltransferases HATs and histone deacetylases HDACs Covered are manipulations at multiple levels from in vitro and in vivo studies to clinical trials and FDA approved therapies The book is divided in four parts endif Part I provides an overview of post translational modifications in the context of development ageing neurodegenerative and cancer related diseases It highlights the role of histone acetylation in higher genome organization and explores the functions of the proteins involved Part II focuses on the modulation of cytoskeleton associated proteins through reversible acetylation It examines how acetylation influences cytoskeletal compartments thereby regulating cellular structure and function Part III examines acetylation in the context of development It describes acetylation as a key regulator of early embryogenesis influencing chromatin structure and gene expression Part IV discusses physiological and pathological aspects of histone and non histone protein acetylation and its modulation by activators and inhibitors The book is a valuable resource for scientists clinicians and academic teachers alike

**Exploring the Frontiers of Regenerative Cardiovascular Medicine** Joshua D. Hutcheson,Julie A. Phillipi,Elena Aikawa,2019-05-15 This Research Topic celebrates the 50th anniversary of the first heart transplant performed in December of 1967 in Cape Town South Africa Cardiovascular researchers met in South Africa in December 2017 to commemorate this event presenting an opportune time to reflect on the achievements of applied cardiovascular research and highlight forthcoming technology developments that will shape the future of cardiovascular medicine The clinical breakthrough in 1967 offered hope to many patients suffering with cardiac complications and these life saving surgeries continue to have a tremendous impact Tissue shortages surgical risks and complications due to improper host transplant tissue interactions however limit the utility of heart transplants to the most severe cases of cardiac morbidity

Recent advances have yielded mechanistic insight into the factors that control cardiovascular tissue maintenance and remodeling. The field of regenerative medicine seeks to control these factors to promote *in situ* tissue regeneration or engineered tissue replacement. These exciting new technologies could lead to a renaissance in the treatment of many cardiovascular diseases just as the realization of heart transplantation 50 years ago. In this Research Topic, researchers and clinicians from regenerative medicine and applied cardiovascular biology provide literature reviews and original manuscripts to demonstrate the trajectory of cardiovascular medicine. The contributions vertically integrate advances by clinicians, engineers, and basic scientists all researching similar topics from different angles and with complementary perspectives. Taken together, these contributions demonstrate the process of applied cardiovascular research from basic science discoveries to implementation in clinical practice.
