Advances in Machine Learning and Data Science Damodar Reddy Edla, Pawan Lingras, Venkatanaresbhabu K., 2018-05-16

The Volume of Advances in Machine Learning and Data Science Recent Achievements and Research Directives constitutes the proceedings of First International Conference on Latest Advances in Machine Learning and Data Science LAMDA 2017. The 37 regular papers presented in this volume were carefully reviewed and selected from 123 submissions. These days we find many computer programs that exhibit various useful learning methods and commercial applications. Goal of machine learning is to develop computer programs that can learn from experience. Machine learning involves knowledge from various disciplines like statistics, information theory, artificial intelligence, computational complexity, cognitive science, and biology. For problems like handwriting recognition, algorithms that are based on machine learning outperform all other approaches. Both machine learning and data science are interrelated. Data science is an umbrella term to be used for techniques that clean data and extract useful information from data. In field of data science, machine learning algorithms are used frequently to identify valuable knowledge from commercial databases containing records of different industries, financial transactions, medical records, etc. The main objective of this book is to provide an overview on latest advancements in the field of machine learning and data science with solutions to problems in field of image, video, data, and graph processing, pattern recognition, data structuring, data clustering, pattern mining, association rule based approaches, feature extraction techniques, neural networks, bio inspired learning, and various machine learning algorithms.

Fifty years ago, A Turing predicted that by 2000 we would have a machine that could pass the Turing test. Although this may not yet be true, AI has advanced significantly in these 50 years and at the dawn of the XXI century is still an active and challenging field. This year is also significant for AI in Mexico with the merging of the two major AI conferences into the biennial Mexican International Conference on Artificial Intelligence MICAI series. MICAI is the union of the Mexican National AI Conference RNIA and the International AI Symposium ISAI organized annually by the Mexican Society for AI SMIA since 1984 and by the Monterrey Institute of Technology ITESM since 1988 respectively. The first Mexican International Conference on Artificial Intelligence MICAI 2000 took place April 11-14, 2000 in the city of Acapulco, Mexico. This conference seeks to promote research in AI and cooperation among Mexican researchers and their peers worldwide. We welcome you all. Over 163 papers from 17 different countries were submitted for consideration to MICAI 2000. After reviewing them thoroughly, MICAI's program committee, referees, and program chair accepted 60 papers for the international track. This volume contains the written version of the papers and invited talks presented at MICAI. We would like to acknowledge the support of the American Association for Artificial Intelligence AAAI and the International Joint Conference on Artificial Intelligence IJCAI. We are specially grateful for the warm hospitality and generosity offered by the Acapulco
