Fundamentals of Statistical Signal Processing Steven M. Kay, 2013 For those involved in the design and implementation of signal processing algorithms this book strikes a balance between highly theoretical expositions and the more practical treatments covering only those approaches necessary for obtaining an optimal estimator and analyzing its performance Author Steven M Kay discusses classical estimation followed by Bayesian estimation and illustrates the theory with numerous pedagogical and real world examples Cover volume 1 Subject Guide to Books in Print, 1993 **Signal Processing for High-density Magnetic Recording Channels** Hamid Reza Shafiee, 1994 **Modern Spectral Estimation** Steven M. Childers, 1999-09-16 Strike a balance between theory and practice With this text you will find a balance between theory and practice that allows you to build your understanding of the basic concepts assumptions and limitations of the theory of speech analysis and synthesis The methods for data analysis as well as the theoretical background are provided to help you comprehend the analysis

results And you ll be able to study the features and properties of speech as a signal without having to record data and write software to analyze the data The text includes two CDs that contain stand alone and MATLAB software and speech and electroglottographic data The CDs illustrate the effects that speech models and speech analysis procedures have on the quality of synthesized speech An extensive speech database provides numerous speech files and other data Examples included in each chapter demonstrate how to use the software The CDs allow you to Calculate the parameters of linear prediction speech models Examine procedures for converting the speech of one speaker to sound like that of another speaker i e voice conversion Analyze and alter the temporal structure of the speech signal This allows you to automatically parse speech into various features such as voiced segments unvoiced segments nasal and non nasal segments fricatives stops and more Create speech with a high speaking rate or generate speech with a slow speaking rate Adjust the parameters of the vocal fold model to change the vocal fold tension length thickness mass etc in order to observe the effects of these parameters on the vibratory motion of the vocal folds
