This manual of problems was written as intended primarily as an aid to instructors teaching from the second volume of the Berkeley Physics Course. They will, I hope, find the material a useful supplement to the text. The solutions for the less routine problems often include some explanations giving beyond the bare requirements of the problem. The instructor would be well advised to prepare the solutions for the more routine problems before he assigns them -- if only to be warned of traps which were set before he knew when the problems were devised.

The solutions were checked by Thomas Knight, who found some errors and made many valuable suggestions for improvement and clarification. Gary Sankoff who feels that the course in his class would be improved if he revised that the author made some mistakes in working his own problems is ready willing to do so. Numerous errors may still turn up. Notice of such could be most welcome, but would any other suggestion for improvement of the material in the manual. Please address any suggestions to the undersigned at Lyman Laboratory, Harvard University, Cambridge, Mass. 02138.

Appropriate parts of this manual may be detached and posted, or with copyright notice displayed, may be reproduced in part in members for the library. We do not, however, recommend that the entire manual be made available to students.
