*Talking about Generative AI: A Guide for Educators* Sidney I. Dobrin, 2023-05-25 A practical new resource available freely to educators and administrators. Instructors and college administrators are grappling with many difficult questions arising from the emergence and public availability of generative AI. GenAI tools such as ChatGPT. What impact will AI have on post secondary institutions? Can AI be integrated into higher education in productive and ethical ways? How will teaching and assessment change? What are the implications of AI for professional institutional and civic communication? This free resource provides administrators and faculty with fundamental information about GenAI and its bearing on instruction and institutional policies. Eminently practical and informed by the latest and forthcoming technical developments. *Talking about Generative AI* will be a boon to anyone who is suddenly confronted with the problem of how to understand and address GenAI's impacts.

**AI, Ethics, and Discrimination in Business** Marco Marabelli, 2024-05-02 This book takes a historical approach to explore data algorithms, their use in practice through applications of AI in various settings and all of the surrounding ethical and DEI implications. Summarizing our current knowledge and highlighting gaps, it offers original examples from empirical research in various settings such as healthcare, social media, and the GIG economy. The author investigates how systems relying on a binary structure machines work in systems that are instead analogic societies. Further, he examines how underrepresented populations who have been historically penalized by technologies can play an active role in the design of automated systems with a specific focus on the US legal and social system. One issue is that main tasks of machines concern classification, which while efficient for speeding up decision making processes, are inherently biased. Ultimately, this work advocates for ethical design and responsible implementation and deployment of technology in organizations and society through government sponsored social justice in contrast with free market policies. This interdisciplinary text contributes to the timely and relevant debate on algorithmic fairness, biases, and potential discriminations. It will appeal to researchers in business ethics and information systems while building on theories from anthropology, psychology, sociology, management, marketing, and economics.

**AI and Writing** Sidney I. Dobrin, 2023-08-18 *AI and Writing* is an introduction to Generative Artificial Intelligence (GenAI) and its emergent role as a tool for academic, professional, civic, and personal writing. Sid Dobrin examines GenAI from two perspectives: the conceptual and the applied. The conceptual approach addresses the function of GenAI and the ramifications of its use as a writing tool, especially the ethical, social, and material issues it raises. The applied approach offers guidance to assist readers in using GenAI responsibly and authentically. In consideration of the rapid evolution of GenAI and the many unsettled questions about its role, Dobrin leaves room for readers to adapt to shifting technological and institutional conventions. This book is intended for composition and writing intensive courses and for any readers with a general or professional interest in the role of GenAI in writing. While it is primarily designed for first year writing courses, it is also applicable to courses in advanced writing, professional writing,

technical writing business writing and writing across the curriculum as well as writing intensive courses in other disciplines In other words it can be used in any course in which students are required to produce texts c't Working with AI c't-Redaktion,2024-01-24 The special issue of c t KI Praxis provides tests and practical instructions for working with chatbots It explains why language models make mistakes and how they can be minimised This not only helps when you send questions and orders to one of the chatbots offered online If you do not want to or are not allowed to use the cloud services for data protection reasons for example you can also set up your own voice AI The c t editorial team explains where to find a suitable voice model how to host it locally and which service providers can host it The fact that generative AI is becoming increasingly productive harbours both opportunities and risks Suitable rules for the use of AI in schools training and at work help to exploit opportunities and minimise risks Artificial Intelligence Literacy in Higher Education Imre Fekete,2025-07-08 This book explores the concept of artificial intelligence AI literacy within higher education addressing both instructors and students preparedness to engage with AI technologies responsibly and effectively By synthesising existing frameworks and empirical studies alongside presenting two original research studies the book bridges theoretical foundations with practical applications tailored for modern educational contexts Practical recommendations include methods to develop AI literacy skills focusing on ethical awareness technological competence and the potential for AI to enhance teaching and learning processes Aimed at higher education instructors stakeholders and students the book offers actionable insights and tools for fostering informed and critical engagement with AI aligned with lifelong learning goals and professional development needs

**Rethinking Informed Consent in the Big Data Age** Adam J. Andreotta,2024-12-23 In the big data age providing informed consent online has never been more challenging Countless companies collect and share our personal data through devices apps and websites fuelling a growing data economy and the emergence of surveillance capitalism Few of us have the time to read the associated privacy policies and terms and conditions and thus are often unaware of how our personal data are being used This is a problem as in the last few years large tech companies have abused our personal data As privacy self management through the mechanism of providing online consent has become increasingly difficult some have argued that surveillance capitalism and the data economy more broadly need to be overthrown This book presents a different perspective It departs from the concept of revolutionary change to focus on pragmatic incremental solutions tailored to everyday contexts It scrutinises how consent is currently sought and provided online and offers suggestions about how online consent practices can be improved upon These include the possibility of subjecting consent gathering practices to ethics committees for review the creation of visual based consent agreements and privacy policies to help with transparency and engagement the development of software to protect privacy and the idea of automated consent functionalities that allow users to bypass the task of reading vast amounts of online consent agreements The author suggests that these small scale changes to online consent obtaining procedures could if successfully implemented provide us with a way of self managing our privacy in a way

that avoids a revolutionary dismantling of the data economy In the process readers are encouraged to rethink the very purpose of providing informed consent online Rethinking Informed Consent in the Big Data Age will appeal to researchers in normative ethics applied ethics philosophy of law and the philosophy of AI It will also be of interest to business scholars communication researchers students and those in industry *Essentials of Marketing Analytics, 1e* Joseph F.
