## CHAPTER 2

### SOLUTIONS TO PROBLEMS

**2.1** (i) Income, age, and family background (such as number of siblings) are just a few possibilities. It seems that each of these could be correlated with years of education. (Income and education are probably positively correlated; age and education may be negatively correlated because women in more recent cohorts have, on average, more education; and number of siblings and education are probably negatively correlated.)

(ii) Not if the factors we listed in part (i) are correlated with  $educ$ . Because we would like to hold these factors fixed, they are part of the error term. But if  $u$  is correlated with  $educ$ , then  $E(u|educ) \neq 0$ , and so SLR.4 fails.

**2.3** (i) Let  $y_i = GPA_i$ ,  $x_i = ACT_i$ , and  $n = 8$ . Then  $\bar{x} = 25.875$ ,  $\bar{y} = 3.2125$ ,  $\sum (x_i - \bar{x})(y_i - \bar{y}) = 5.8125$ , and  $\sum (x_i - \bar{x})^2 = 56.875$ . From equation (2.19), we obtain the slope as  $\hat{\beta}_1 = 5.8125/56.875 \approx .1022$ , rounded to four places after the decimal. From (2.17),  $\hat{\epsilon}_i = \bar{y} - \hat{\beta}_1 \bar{x} \approx 3.2125 - (.1022)25.875 \approx .5681$ . So we can write

$$\begin{aligned} GPA &= .5681 + .1022 ACT \\ n &= 8. \end{aligned}$$

The intercept does not have a useful interpretation because  $ACT$  is not close to zero for the population of interest. If  $ACT$  is 5 points higher,  $GPA$  increases by  $.1022(5) = .511$ .

(ii) The fitted values and residuals — rounded to four decimal places — are given along with the observation number  $i$  and  $GPA$  in the following table:

**Solutions Manual for Econometrics** Badi H. Baltagi,1998 This manual provides solutions to selected exercises from each chapter of Econometrics by Badi H Baltagi starting with Chapter 2 For the empirical exercises some SAS programs are provided to replicate the results

Most graphs are plotted using EViews Some of the problems and solutions are obtained from Econometric Theory ET and these are reprinted with the permission of Cambridge University Press I would like to thank Peter C B Phillips and the

editors of the Problems and Solutions section Alberto Holly and Juan Dolado for this useful service to the econometrics profession I would also like to thank my colleague James M Griffin for providing many empirical problems and data sets I

have also used three empirical data sets from Lott and Ray 1992 The reader is encouraged to apply these econometric techniques to their own data sets and to replicate the results of published articles Some journals authors provide data sets

upon request or are readily available on the web Other empirical examples are given in Lott and Ray 1992 and Berndt 1991

Finally I would like to thank my students Wei Wen Xiong Ming Jang Weng and Kiseok Nam who solved several of these

**Theory and Applications of Time Series Analysis and Forecasting** Olga Valenzuela,Fernando Rojas,Luis Javier Herrera,Héctor

Pomares,Ignacio Rojas,2023-04-04 This book presents a selection of peer reviewed contributions on the latest developments

in time series analysis and forecasting presented at the 7th International Conference on Time Series and Forecasting ITISE

2021 held in Gran Canaria Spain July 19 21 2021 It is divided into four parts The first part addresses general modern methods and theoretical aspects of time series analysis and forecasting while the remaining three parts focus on forecasting methods in econometrics time series forecasting and prediction and numerous other real world applications Covering a broad range of topics the book will give readers a modern perspective on the subject The ITISE conference series provides a forum for scientists engineers educators and students to discuss the latest advances and implementations in the foundations theory models and applications of time series analysis and forecasting It focuses on interdisciplinary research encompassing computer science mathematics statistics and econometrics **Introductory Econometrics** Jeffrey M. Wooldridge,2000

**Economic Statistics and Econometrics** Thad W. Mirer,1988 Combines technique with application using real data sets The core of the book Chapters 1 13 covers the basic statistical concepts necessary for econometrics with an emphasis on regression analysis Part V is a treatment of advanced econometrics theory [Computational Intelligent Data Analysis for Sustainable Development](#) Ting Yu,Nitesh Chawla,Simeon Simoff,2016-04-19 Going beyond performing simple analyses researchers involved in the highly dynamic field of computational intelligent data analysis design algorithms that solve increasingly complex data problems in changing environments including economic environmental and social data Computational Intelligent Data Analysis for Sustainable Development presents novel methodologies for automatically processing these types of data to support rational decision making for sustainable development Through numerous case studies and applications it illustrates important data analysis methods including mathematical optimization machine learning signal processing and temporal and spatial analysis for quantifying and describing sustainable development problems With a focus on integrated sustainability analysis the book presents a large scale quadratic programming algorithm to expand high resolution input output tables from the national scale to the multinational scale to measure the carbon footprint of the entire trade supply chain It also quantifies the error or dispersion between different reclassification and aggregation schemas revealing that aggregation errors have a high concentration over specific regions and sectors The book summarizes the latest contributions of the data analysis community to climate change research A profuse amount of climate data of various types is available providing a rich and fertile playground for future data mining and machine learning research The book also pays special attention to several critical challenges in the science of climate extremes that are not handled by the current generation of climate models It discusses potential conceptual and methodological directions to build a close integration between physical understanding or physics based modeling and data driven insights The book then covers the conservation of species and ecologically valuable land A case study on the Pennsylvania Dirt and Gravel Roads Program demonstrates that multiple objective linear programming is a more versatile and efficient approach than the widely used benefit targeting selection process Moving on to renewable energy and the need for smart grids the book explores how the ongoing transformation to a sustainable energy system of renewable sources leads to a paradigm shift from demand driven

generation to generation driven demand It shows how to maximize renewable energy as electricity by building a supergrid or mixing renewable sources with demand management and storage It also presents intelligent data analysis for real time detection of disruptive events from power system frequency data collected using an existing Internet based frequency monitoring network as well as evaluates a set of computationally intelligent techniques for long term wind resource assessment In addition the book gives an example of how temporal and spatial data analysis tools are used to gather knowledge about behavioral data and address important social problems such as criminal offenses It also applies constraint logic programming to a planning problem the environmental and social impact assessment of the regional energy plan of the Emilia Romagna region of Italy Sustainable development problems such as global warming resource shortages global species loss and pollution push researchers to create powerful data analysis approaches that analysts can then use to gain insight into these issues to support rational decision making This volume shows both the data analysis and sustainable development communities how to use intelligent data analysis tools to address practical problems and encourages researchers to develop better methods
