Rasch Models Gerhard H. Fischer, Ivo W. Molenaar, 2012-12-06 Thirty two years after the publication of the legendary Rasch book Rasch 1960 the rich literature on the Rasch model and its extensions was scattered in journals and many less accessible sources including grey literature When asked by students or junior researchers for references to the Rasch model it was a typical reaction on the part of the editors to state that it was difficult to name one or just a few actually only a whole list of references differing in notation and level of formal abstraction seemed to meet the request in most cases Therefore in 1992 the editors decided to invite a number of outstanding authors in the field of Rasch modeling to contribute to a book presenting the current state of knowledge about Rasch models The aim was not just to collect a number of papers on the subject rather to produce a well organized monograph To this end a workshop was held in Vienna from 25 to 27 February 1993 in which after a process of mutual reviewing drafts of all chapters were read and discussed by all authors leading to a more systematic organization of the topics treated in unified notation and terminology The workshop was sponsored by the University of Vienna here the editors would like to express their thanks in the name of all contributors both for the financial support and for the hospitality granted Topics in Statistical Simulation V.B. Zou, 2017-11-22 With ever rising healthcare costs evidence generation through Health Economics and Outcomes Research HEOR plays an increasingly important role in decision making about the allocation of resources Accordingly it is now customary for health technology assessment and reimbursement agencies to request for HEOR evidence in addition to data from clinical trials to inform decisions about patient access to new treatment options While there is a great deal of literature on HEOR there is a need for a volume that presents a coherent and unified review of the major issues that arise in application especially from a

statistical perspective Statistical Topics in Health Economics and Outcomes Research fulfils that need by presenting an overview of the key analytical issues and best practice Special attention is paid to key assumptions and other salient features of statistical methods customarily used in the area and appropriate and relatively comprehensive references are made to emerging trends The content of the book is purposefully designed to be accessible to readers with basic quantitative backgrounds while providing an in depth coverage of relatively complex statistical issues The book will make a very useful reference for researchers in the pharmaceutical industry academia and research institutions involved with HEOR studies The targeted readers may include statisticians data scientists epidemiologists outcomes researchers health economists and healthcare policy and decision makers

Strawderman, Martin T. Wells, 2018-11-27 This book provides a coherent framework for understanding shrinkage estimation in statistics The term refers to modifying a classical estimator by moving it closer to a target which could be known a priori or arise from a model The goal is to construct estimators with improved statistical properties The book focuses primarily on point and loss estimation of the mean vector of multivariate normal and spherically symmetric distributions Chapter 1 reviews the statistical and decision theoretic terminology and results that will be used throughout the book Chapter 2 is concerned with estimating the mean vector of a multivariate normal distribution under quadratic loss from a frequentist perspective In Chapter 3 the authors take a Bayesian view of shrinkage estimation in the normal setting Chapter 4 introduces the general classes of spherically and elliptically symmetric distributions Point and loss estimation for these broad classes are studied in subsequent chapters In particular Chapter 5 extends many of the results from Chapters 2 and 3 to spherically and elliptically symmetric distributions Chapter 6 considers the general linear model with spherically symmetric error

distributions when a residual vector is available Chapter 7 then considers the problem of estimating a location vector which is constrained to lie in a convex set Much of the chapter is devoted to one of two types of constraint sets balls and polyhedral cones In Chapter 8 the authors focus on loss estimation and data dependent evidence reports Appendices cover a number of technical topics including weakly differentiable functions examples where Stein's identity doesn't hold Stein's lemma and Stokes theorem for smooth boundaries harmonic superharmonic and subharmonic functions and modified Bessel functions
